

Camp Overview

This is a full plan for a **AI Skills for Kids** camp of **51 children** on Saturday 15 August 2026. The intake is split into age bands — 7-9 yrs (20), 10-12 yrs (19), 13-15 yrs (12) — and each band into small groups so every child works at the right level and gets plenty of hands-on time. The sections below give the group split, staffing, the master timetable, and a tailored programme for each band.

Groups at a Glance

Each group stays together all day with its own lead facilitator, so no child is ever in a group larger than the target size.

AGE BAND	GROUP	SIZE
7-9 yrs	7-9 yrs · Group A	10 children
7-9 yrs	7-9 yrs · Group B	10 children
10-12 yrs	10-12 yrs · Group A	10 children
10-12 yrs	10-12 yrs · Group B	9 children
13-15 yrs	13-15 yrs · Group A	6 children
13-15 yrs	13-15 yrs · Group B	6 children

Staffing & Ratios

With **51 children** in **6 groups**, this plan needs **10 adults** on the day — an overall ratio of about **1 adult to 5.1 children** (target 1:10 or better).

ROLE	PEOPLE
Lead facilitators (one per group)	6

ROLE	PEOPLE
Floating helpers	2
Camp coordinator	1
First-aider	1
Total adults	10

Master Day Timetable

The whole camp runs on one clock. Groups start and stop together so breaks, lunch and the showcase stay in sync.

TIME	ACTIVITY
08:30 – 09:00	Arrival, registration & name badges
09:00 – 09:20	Opening assembly — welcome, safety brief, split into groups (all bands together)
09:20 – 10:45	Project Block 1 — each group in its own space
10:45 – 11:05	Morning break & snack (staggered so the space doesn't crowd)
11:05 – 12:30	Project Block 2 — build continues / next activity
12:30 – 13:15	Lunch & free play (supervised, outdoors if possible)
13:15 – 14:30	Project Block 3 — finish builds, test & debug
14:30 – 14:50	Showcase prep — groups tidy kits and rehearse a 60-second demo
14:50 – 15:20	Showcase & demos — every group presents to the whole camp
15:20 – 15:30	Closing circle, certificates & departure

Programme by Age Band

7-9 yrs (2 groups — Group A and Group B, 10 children each)

- **Block 1:** Prompting power — ChatGPT basics: ask better questions
- **Block 2:** AI art studio — DALL-E image generation workshop
- **Block 3:** AI music & sound — generate soundtracks and beats, then remix/replay favourites (doubles as the "test & debug" slot — children try different prompts to fix sounds they don't like)

Learning goals:

- Understand that AI tools respond to the words we give them, and that clearer questions get better answers.
- Experience three different types of generative AI (text, image, sound) in one day.
- Practise turn-taking, sharing a device, and basic keyboard/typing confidence.

Facilitator brief: Prepare pre-typed "starter prompts" on cards so children who freeze at a blank box can still begin. Log in to all tools in advance with kid-safe/moderated accounts and pre-check content filters. Watch for children dominating the keyboard — enforce a visible timer or "driver/navigator" swap every 5 minutes. Keep energy up with short movement breaks between the three activities since attention spans are short at this age; celebrate every output loudly, there is no "wrong" prompt.

10-12 yrs (2 groups — Group A and Group B, 9-10 children each)

- **Block 1:** AI storytelling — write an illustrated story with AI (text + image generation)
- **Block 2:** Teachable Machine — train your own image classifier
- **Block 3:** Mashup madness — combine the story from Block 1 and the classifier from Block 2 into one creative mini-project (e.g. a classifier that "recognises" characters or props from their story); this block is explicitly test-and-debug time — retrain the model on more samples if accuracy is poor

Learning goals:

- Understand that machine learning models are trained on examples, and that more/better examples improve accuracy.
- Build a multi-step creative project that chains more than one AI tool together.
- Practise structured problem-solving: test, spot the error, retrain/adjust, retest.

Facilitator brief: Bring a small set of physical props (see materials list) so Teachable Machine has consistent training objects across both groups. Pre-load a saved example story and a saved example model so groups that get stuck have a working reference. Watch for models trained on too few/too similar images — prompt children to add more varied samples. During Mashup madness, help groups

articulate in one sentence "how" their two tools connect, ready for the 60-second showcase.

13-15 yrs (2 groups — Group A and Group B, 6 children each)

- **Block 1:** Bias detective — find and discuss bias in AI tools
- **Block 2:** AI careers deep dive — ML engineers, ethicists, data scientists
- **Block 3:** Build your portfolio — GitHub, pitch deck and showcase prep (abbreviated version: teens use their Block 1 bias findings and Block 2 career research as the content for a one-page pitch deck and a simple GitHub repo/README, rather than completing the full 120-minute build)

Learning goals:

- Critically evaluate AI outputs for bias, fairness and limitations rather than accepting them at face value.
- Connect today's activities to real career pathways in AI/tech.
- Produce a shareable artefact (repo + pitch deck) that documents their thinking and can be presented confidently.

Facilitator brief: Prepare 3-4 pre-selected AI tools/examples with known, discussable bias issues (e.g. image generation stereotypes, translation errors) so Bias detective has concrete starting points rather than an open-ended search. For careers deep dive, bring short (2-3 min) video or printed profiles of real practitioners to anchor discussion. For Build your portfolio, pre-create GitHub accounts/repos in advance to save time, and have a slide template ready so teens only need to fill in content. Because this is an advanced 120-minute project condensed into ~75 minutes, be ready to help groups prioritise — a finished simple deck beats an unfinished complex one.

Materials Master List

ITEM	SPEC	PER GROUP	GROUPS	TOTAL NEEDED
Laptop (Wi-Fi enabled)	Chromebook or Windows laptop, browser + webcam	5	2 (7-9 yrs)	10
Laminated prompt starter cards	A6 cards, set of 20 example ChatGPT/ DALL-E prompts	1 set	2 (7-9 yrs)	2 sets

Headphones	Basic wired headphones, child-size	10	2 (7–9 yrs)	20
Flipchart + markers	A1 flipchart pad, 4-colour marker set	1	2 (7–9 yrs)	2
Laptop (Wi-Fi enabled, built-in webcam)	Chromebook or Windows laptop	5	2 (10–12 yrs)	10
Teachable Machine training props	Set of 10 small varied objects (fruit, stationery, toys) for image classifier training	1 set	2 (10–12 yrs)	2 sets
Storyboard/illustration template	A4 printed template, 3-panel story layout	10	2 (10–12 yrs)	20
Laptop (Wi-Fi enabled)	Chromebook or Windows laptop	3	2 (13–15 yrs)	6
Pitch deck template (printed + digital)	Pre-built slide template, 5 slides, editable	1 set	2 (13–15 yrs)	2 sets
Notebook & pen	A5 notebook, ballpoint pen	6	2 (13–15 yrs)	12
Power strip / extension cable	4-socket surge-protected strip, 3m cable	1–2	6 (all groups)	10 (shared pool)
Mobile Wi-Fi hotspot (backup)	4G/5G portable router, pre-loaded data	—	shared	2 (camp-wide backup)
Device charging cart/ cables	USB-C/laptop charger set	—	shared	1 cart (all 26 laptops)

Shared kit note: All laptops (26 in total across the camp — 10 for 7–9 yrs, 10 for 10–12 yrs, 6 for 13–15 yrs) should be sourced as one bulk booking from Nerokas or Pixel Electronics, pre-tested and charged the evening before. Power strips and the backup mobile hotspot are camp-wide shared resources, not allocated per band — keep a "floating" pool of 2 spare power strips and 1 spare laptop per age zone in case of failure.

Safety, Logistics & Contingencies

Room/space plan

Allocate three zones so each age band has its own quiet, defined space and groups aren't sharing sightlines/noise: (1) main hall divided by portable partitions or table clusters for the two 7–9 yrs groups (higher noise tolerance, closest to toilets/snack

area); (2) a second room or the far end of the hall for the two 10–12 yrs groups (needs table space for props and laptops side by side); (3) a smaller quiet room for the two 13–15 yrs groups (discussion-heavy, needs less floor space but more focus). Each of the 6 groups gets its own table cluster, its own kit box, and one named lead facilitator; the remaining adults roam as tech/behaviour support and cover breaks.

Movement between blocks

Groups stay in their assigned zone for all three project blocks — only facilitators and roaming support move, not the children — to minimise disruption and lost kit. Breaks and lunch are staggered by age band (start 7–9 yrs five minutes early, finish 13–15 yrs five minutes late) so toilets, snack tables and the outdoor play area never crowd.

Allergy/first-aid notes

Collect allergy and medical information at registration and flag it clearly on each child's name badge (e.g. a small coloured dot) so all adults can see it at a glance. Snacks should be nut-free and clearly labelled by ingredient; keep one designated allergy-safe snack table. Post the first-aider's name and location at the entrance, keep a stocked first-aid kit in each of the three zones, and confirm emergency contact numbers are printed and accessible to the coordinator before doors open.

Contingencies

- **Wet weather:** Move lunchtime free play indoors into the main hall (clear the 7–9 yrs tables to the sides); have a stock of quiet indoor games (cards, building blocks) ready as a substitute for outdoor play.
- **Early finishers:** Prepare bonus stretch challenges per band — 7–9 yrs get extra "prompt battle" cards; 10–12 yrs are challenged to retrain their classifier with a harder category; 13–15 yrs add a second bias example or polish their pitch deck design — so no group is idle before showcase prep.
- **Equipment failure:** Keep 1 spare laptop per zone and a mobile hotspot on standby. If a device or internet connection fails entirely, switch that group to an "unplugged AI" backup worksheet (e.g. act out how a classifier sorts objects, or hand-write prompts on paper) so the session continues without a screen.

Staff Briefing Checklist

- All 26 laptops charged, logged into correct kid-safe/moderated AI accounts, and browser bookmarks set per activity
- Mobile Wi-Fi hotspot tested as backup; main Wi-Fi password shared with all facilitators
- Each of the 6 kit boxes checked against the materials list and labelled with group name
- Allergy/medical list reviewed by all adults; allergy-safe snack table set up and labelled
- First-aid kits stocked and positioned in all three zones; first-aider identified to the whole team
- Room zones set up per the space plan, with table clusters, partitions and signage in place
- Name badges, badge printer/pens and registration desk ready for 08:30
- Facilitator leads confirmed for each of the 6 groups, with roaming support adults assigned
- Staggered break/lunch timings communicated to all staff so zones don't crowd
- Early-finisher stretch challenges and wet-weather backup activities printed/ready in every zone
- Showcase space, projector/speaker (for any audio/video demos) tested ahead of time
- Certificates printed and closing circle materials ready
- Emergency contacts and evacuation procedure posted at the entrance and reviewed by all staff
